Jude Francis

Software Engineer

Lagos, Nigeria · hello@judecod.es · judecod.es · linkedin.com/in/judecodes · github.com/jsbuddy

SUMMARY

I've been writing software for 8 years, starting with frontends at a Lagos fintech and moving deeper into the stack ever since: data models, pipelines, APIs, and lately AI agents. Today I'm CTO at StatiSense, where most of my week goes into building Immortal BI, our self-serve business intelligence platform.

EXPERIENCE

Chief Technology Officer, StatiSense

Lagos, Nigeria · Jan 2023 - Present (Head of Engineering through Aug 2023)

- Lead Immortal BI, our self-serve business intelligence platform, and build it end to end: the data-modeling layer, the pipelines under it, and the dashboard, story, and agent builders on top.
- Set technical direction across our B2C, B2B, and B2G products.
- Decide where AI fits in our products and build those features when it does, mostly agents that answer the questions teams used to open spreadsheets for.

Lead Frontend Developer, Clan

Lagos, Nigeria · Jan 2022 - Dec 2022

- Led the frontend team at a buy-now-pay-later company making split payments easier across Africa.
- Owned the architecture of the customer and merchant apps, and kept them fast and maintainable as the product and team grew.

Founding Engineer, Cribstock

Lagos, Nigeria · Part-time · May 2021 - Dec 2022

- One of the first engineers on a platform where people co-own property through fractional real estate and earn monthly rental income.
- Built the frontend: portfolio management, real-time rental income tracking, and the investment flows for co-ownership and rental deals.

Frontend Developer, Clan

Lagos, Nigeria · Sep 2018 - Dec 2021

- Built user interfaces that made split payments simple for customers and merchants.
- Shipped features alongside product and design, with an eye on performance and accessibility.

PROJECTS

Immortal BI (useimmortal.com)

React · Next.js · TypeScript · Python · MongoDB · PostgreSQL

A self-serve business intelligence platform: connect your data, then work with it through stories, dashboards, or agents instead of spreadsheets and SQL. The product I've spent most of my time at StatiSense on.

Pull Pal (pull-pal.vercel.app)

TypeScript · Node.js · Git

An open-source CLI that blocks stale or broken Git pushes. It hooks into Git's pre-push step, checks your branch against the remote, and runs your tests, zero-config across JavaScript, Go, Python, and more.

Cribstock (cribstock.com)

React · Next.js · TypeScript · Tailwind CSS

A fractional real estate platform letting people co-own property and earn rental income. I owned the frontend: portfolio dashboard, real-time income tracking, and investment flows.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, Kotlin (Android), Node.js, Bun, React, Next.js, Tailwind CSS, LangChain, LangGraph, FastAPI

Databases & Tools: PostgreSQL, MongoDB, MySQL, MSSQL, Redis, Docker, Kubernetes, Figma

Focus areas: AI agents, SaaS platforms, full-stack web apps, microservices, business intelligence & data products

EDUCATION

BSc Computer Science, Lecitoyen University

Cotonou, Benin Republic
